- Mark the questions from the formulae and not the values/answers in the cell.
- Check against candidate's actual work (Cell references may differ, depending on the candidate's response).
- Candidate may use multiple formulae, cells or 'building blocks' to reach answers.
- Named ranges can be used instead of cell references.
- The answers must still be correct even if values are changed in the existing data.

2. The sequence of the concepts is determined by the logic used

- SMALL ✓ (\$E\$10:\$E\$70,6) ✓
- First condition ✓ Output for first condition ✓
- Second condition ✓ Output for second condition ✓
- Output for the third condition ✓

Concepts:

- Determine whether within 6 shortest distances for Output: "Short"
- Determine whether distance exceeds 100 for Output: "Long"
- Determine whether distance is between 6 shortest and 100 for Output "Medium"
